

Analysis Report

Detailed Report of Assessments conducted during the Placement training held at mLAC for UG and PG students from 27 March 2023 to 08 April 2023

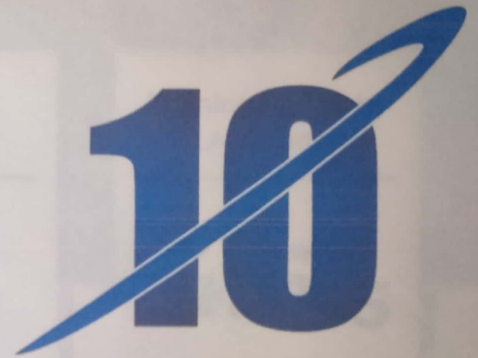

What are Pre-assessments and Post-assessments

Pre-assessment and post-assessment are evaluation methods used to measure the effectiveness of training or educational programs.

Pre-assessment is a measure of an individual's knowledge or skills before participating in a training or educational program. This assessment helps to identify areas in which the individual needs improvement and provides a baseline for comparison with the post-assessment.

Post-assessment is a measure of an individual's knowledge or skills after participating in a training or educational program. This assessment is used to determine the effectiveness of the program in improving the individual's skills or knowledge. The results of the post-assessment are compared with the pre-assessment results to determine the effectiveness of the program.
